JOS GLOBALLY

THE JOS PLATEAU'S GLOBAL MOVEMENT

MASTER DEVELOPMENT ROADMAP & TECHNICAL PRODUCT BLUEPRINT

A contribution-led stakeholder movement, international commercial gateway and long-term destination platform for Plateau State.

PROJECT	FOUNDING ECOSYSTEM
josglobally.com Web application + installable PWA Initial coordination: Nigeria and China	CAGE Holdings (proposed founding sponsor) CBrilliance • AfrESH • Genius WAV Joscity • JosRide • Additional approved partners

Technology baseline: TypeScript • Next.js App Router • SCSS • Bun • PostgreSQL • Supabase Auth / Storage / Database • PWA Service Worker

Planning status: Strategic recommendations, not proof of formal incorporation, ownership, office registration, government endorsement or verified partner commitments. Regulatory and financial structures require professional validation.

01 Executive definition

Jos Globally is a proposed people-powered platform to strengthen Plateau State's global visibility, commercial connectivity, trade capacity, investment readiness and visitor appeal. The launch mechanism is a transparent partnership contribution programme beginning at NGN 1,000, with receipt submission and administrative verification. The long-term product should become an operating platform for measurable opportunity, not merely a public donor list.

Mission, vision and outcome

- Mission: connect people, capital, enterprises, experiences and international relationships around Plateau State.
- Vision: make the Jos Plateau a globally discoverable, commercially connected and investable destination.
- North-star outcome: verified economic and cultural opportunities facilitated for Plateau people and enterprises, not only money collected.

Operating pillars

Pillar	User value	Primary platform capability
Movement & Stakeholders	Contribute, join, verify and follow impact	Onboarding, contribution ledger, dashboard, reporting
Global Trade	Access credible overseas buyer/supplier contacts	Business directory, export-readiness, matchmaking
Investment & Development	Identify vetted projects and institutional partners	Opportunity listings, due diligence, applications
Destination Plateau	Discover the state and plan visits	Destination stories, experiences, guides and leads

Critical launch assumption

The provided concept treats financial contributions as partnership participation and links future benefits to amounts paid. This must be defined in signed terms. Until formal legal advice is received, do not call contributions shares, equity, units, deposits, investments or guaranteed returns; do not imply public contributions purchase a legal stake in CAGE Holdings or its affiliates.

02 Target audiences and jobs-to-be-done

Audience	Problem to solve	Initial product journey
Residents and individuals	Want meaningful participation without a high entry cost	Create profile → NGN 1,000+ contribution → proof → verification
Traders and SMEs	Lack trusted export contacts and global discovery	Business verification → portfolio → programme applications
Plateau diaspora	Want traceable routes to support opportunity at home	Join overseas → contribute → follow impact → introduce leads
Institutions / public officeholders	Need legitimate partnerships and accountable reporting	Institutional enrolment → verified projects → reporting
International buyers / investors	Need credible counterparties, context and follow-through	Discover → due diligence → enquire → tracked introductions
Visitors, press and partners	Need trustworthy stories and practical travel information	Explore Plateau → guides → verified bookings / contacts

03 Identity and design system

Positioning: modern international institution with proud Plateau roots. No government seal or official endorsement unless explicitly authorised. Prefer actual landscape, craft, people and business photography, with consent and credit.

Design token	HEX	Use
Forest green	#123C35	Primary brand, navigation, headings
Muted gold	#C6A15B	Emphasis, progress, premium accent
Warm ivory	#F5F2E9	Main background and long-form reading
Deep charcoal	#172522	Primary type, contrast surfaces
Sage green	#738D80	Secondary surfaces and charts

- Type: Manrope for screens, forms and dashboards; DM Serif Display sparingly for editorial hero lines; load via next/font.
- UX: responsive 8-point spacing, 44px+ touch targets, bilingual-ready content, WCAG 2.2 AA, consistent empty / loading / error / success states.
- Art direction: premium and minimal; no neon, glowing borders, imaginary government badges or generic stock-world imagery.

Recommended homepage narrative

Hero: “From the Jos Plateau to the World.” / Supporting line: “A global movement connecting our people, businesses, culture and opportunities.” / Primary CTA: “Become a Partner” / Secondary CTA: “Explore the Movement”. Continue with mission, four pillars, verified milestones, transparent financial overview, featured enterprises, global opportunities, sponsor disclosure, frequently asked questions and clear footer policies.

04 Site map, user interfaces and navigation

Public pages	Authenticated partner pages	Operations dashboard
Home; About & Governance; Movement; How Partnership Works; Impact & Reports; Discover Plateau	Overview; My Partnership; Contributions; Receipts; Opportunities; My Business; Notifications	Applications; Payment Verification; Matching; Opportunities; Members; Business Reviews
Trade Gateway; Business Directory; Investment Opportunities (non-offer); Stories & News; China Desk; FAQ; Contact	Account Settings; Consent; Support Tickets; Contribution History; Document Vault	Finance & Reconciliation; Reporting; CMS; Permissions; Audit Log; Security; Campaigns

Routes example: /, /movement, /partners/join, /partners/checkout, /partners/verification, /dashboard, /dashboard/contributions, /trade, /discover, /opportunities, /china-desk, /admin. Build role-aware layouts, not separate apps.

05 Partnership onboarding and contribution model

Journey and contribution validation

1. Browse mission and transparent programme terms. 2. Choose individual, business, organisation or institution. 3. Sign up via email OTP or passwordless link; verify contact. 4. Complete relevant identity or business profile. 5. Enter NGN 1,000 or more (no undisclosed fees). 6. Generate a unique, expiring contribution intent and display verified beneficiary bank account. 7. Pay via bank transfer and submit reference, amount, transfer date and receipt. 8. System marks “Submitted / Awaiting Review”. 9. Reviewer checks bank ledger and receipt; second approver confirms according to thresholds. 10. On confirmed settlement, issue digital acknowledgement, membership record and contribution history. 11. Notify user and show next actions.

Suggested statuses

Contribution: draft → awaiting_payment → proof_submitted → under_review → confirmed / rejected / needs_information / expired / refunded. Partnership: pending → active → flagged / suspended / closed. State transitions are server-only; payments are not verified by uploading an image alone.

Partner recognition

Use individual / enterprise / institutional categories for useful segmentation. A visible cumulative contribution total and optional non-financial recognition levels can exist, but an amount does not confer ownership or monetary entitlement by default. Never describe tiers as securities or rank human worth by contribution. The right to participate in specific programmes must follow objective published rules and appropriate eligibility reviews.

Benefits policy decision

Define benefits as possible access to verified programmes, calls for applications, trade briefings, educational support, introductions or event priority, subject to capacity, eligibility, fairness and legal review. If leadership intends proportional financial gains, dividends, profit share or automatic investment allocation, suspend that feature until corporate counsel and securities specialists define a lawful investment structure and licensed intermediary if required.

06 Receipts, bank transfers and financial reconciliation

• Show beneficiary legal name, bank, account number, generated contribution reference, accepted currency and expiry. Display “Verify recipient details before transfer”; never accept transfers to a personal or unapproved account.

• Receipt uploads: private Supabase Storage bucket, max file size, MIME and extension validation, malware scanning, safe image preview; retain immutable evidence metadata and hash. Never expose receipt URLs publicly.

• Proof is evidence, not settlement. Match bank statements / provider feed against reference + amount + destination + date; detect duplicates, partial payments, mismatched sender, suspicious patterns and chargebacks.

• Use an append-only double-entry style internal ledger for financial events and separately reconcile to bank statements; never treat manually editable contribution totals as authoritative.

• Add dual-control review and a documented exception queue; no person may submit, verify and finally approve their own transaction.

• Generate acknowledgement IDs and receipts distinguishing “contribution confirmed” from tax-deductible charitable donation receipts; tax treatment requires specialist assessment.

• Support reversals, refunds, chargebacks where applicable, support cases, data retention and periodic audited financial reporting.

Payment extension options

Launch with manual bank transfer if required. Architect the payment interface with provider adapters so unique virtual accounts, transfer webhooks, bank statement APIs and supported card payments can be added later. Provider webhook events require HMAC/signature verification, replay protection and idempotency keys. Do not build or publish fictitious automatic bank verification.

07 Stakeholder dashboards and transparent public reporting

Partner dashboard: membership status, cumulative confirmed contribution, individual transactions, private receipts, acknowledgement PDFs, identity verification, preferences, programme applications, messages and support tickets.

Movement dashboard: confirmed contributions, allocation by approved programme, project milestones, published disbursements, aggregate partner counts, public governance documents and downloadable impact reports. Public metrics must exclude pending transfers and respect private identity preferences.

Admin dashboards: contribution verification SLA, reconciliation gap, flagged transactions, membership cohorts, geographic distribution, opportunity pipeline, programme beneficiaries, conversion funnel and access-log alerts.

Governance before scale

- Publish the owning legal entity, its CAC record where applicable, board / trustees, CAGE Holdings sponsor role, affiliated-party disclosures, fund custody and authorised signatories.
- Adopt conflict-of-interest, procurement, vendor selection, expense approval, whistleblowing and partner grievance policies.
- Publish annual financial statements when applicable; consider an independent review or audit; state the frequency of public impact updates.
- Do not claim government sponsorship, official representation or NGO charitable status unless evidenced.

08 International trade and China desk

The China office is a proposed operational anchor, not a substitute for trade compliance. The China Desk should start as a structured enquiry and relationship-management workflow with named coordinators, documented service scope and market intelligence.

Trade module release

- Verified enterprise profiles: products, sector, capacity, certifications, export readiness, contacts, location and media, plus manual approval.
- Enquiries and matchmaking: buyer requests, supplier applications, introductions, lead ownership, meeting log, NDA / consent workflow and outcome tracking.
- Trade-readiness checklists: NEPC exporter registration, export documentation, products subject to SON/NAFDAC/quarantine rules, shipping / customs partners and Incoterms education.
- China Desk: bilingual-ready landing page, appointments, contact requests, sourcing requests, visits and trade-mission calendar; verify offices, personnel, visas and registrations before claiming local operations.

NEPC and federal trade portals outline export registration and documentary requirements; examples include NXP forms, certificates of origin, invoices, packing lists, shipping documents and category-dependent certifications. These are guidance topics, not one universal checklist for all products. [S4, S5, S6]

China legal boundary

A Chinese representative office may have restricted non-profit liaison and market research functions and generally cannot conduct ordinary profit-making trade. Obtain PRC counsel advice on representative office versus foreign-invested company, contracts, local staffing, tax and data processing before opening or advertising commercial services. [S7]

09 Investor and development opportunity hub

Launch as an information and enquiry hub, not a securities purchase or profit-sharing platform. Projects may have a public summary, developer profile, sector, readiness stage, evidence, estimated budget (labeled project estimate), social / economic outcomes, enquiries and diligence status.

- Project lifecycle: submitted → screened → documentation requested → due diligence → published → introductions → negotiation (off-platform and separately contracted) → closed / withdrawn.

- No pooled investor funds, stock units, promised financial yields, financial return projections presented as guarantees, or unauthorised securities offerings.
- Require disclosure of developer identity, project ownership, land/title issues where relevant, material risks, fundraising structure and permissions before promoting a specific investment.

If later accepting securities investments or conducting investment-based crowdfunding, engage qualified Nigerian securities counsel and the SEC-regulated intermediary regime before implementation. [S1]

10 Discover Plateau, diaspora and global storytelling

Build an editorial destination portal featuring authenticated landmarks, heritage, arts, agriculture, local technology, entrepreneurship, cuisine, festivals, creators and business success stories. Use licensed or owned images and request consent for community stories.

- Destination catalogue with categories, maps, safe visiting guidance, operating/contact details, moderation and editorial provenance.
- Diaspora opportunities: mentors, industry experts, ambassadors, trade delegates, university connections and cross-border chapter coordinators.
- Visitor intent: request a local guide, discover an event, explore hospitality and read practical travel information. Do not invent booking inventory; connect verified operators when ready.
- Editorial CMS: scheduled publishing, author review, structured SEO, multilingual drafts and correction log.

11 Technical architecture and engineering standards

Layer	Recommended implementation
Runtime & build	Bun (pinned stable version via lockfile); CI verifies compatibility before deployment.
App	Next.js App Router + TypeScript strict mode, Server Components, server-only actions and route handlers.
UI	SCSS modules / design tokens; semantic components; responsive layouts; icon library; next/font.
DB	Supabase-managed PostgreSQL; migrations with Supabase CLI, indexed relational schema, constraints.
Auth	Supabase Auth, email verification, MFA for staff, RBAC plus Postgres RLS and service-side policy checks.
File storage	Supabase Storage private buckets; signed short-lived URLs; secure scans and retention controls.
Background jobs	Durable job queue / scheduled worker, or Supabase Edge Functions where appropriate; retry and dead letter handling.
Infrastructure	Production hosting with Nigeria-friendly latency, HTTPS, DNS / CDN / WAF, backups, secrets manager.
Operations	Sentry-compatible error tracing, uptime checks, metrics, structured logs and runbooks.

Architecture path

Browser / installable PWA → edge CDN and HTTPS → Next.js server routes / actions → authorisation and domain services → Supabase Auth, Postgres, Storage → reconciliation jobs, email/push, analytics and external bank feeds. Sensitive finance operations should be server-side and transactional, never trusted to the client.

Repository and conventions

Use src/app/(marketing), src/app/(auth), src/app/(partner), src/app/(admin), src/components, src/features, src/lib/server, src/lib/supabase, src/styles, supabase/migrations, tests/e2e, tests/integration. Code owners, conventional commits, formatting, linting, PR review, typed environment validation, protected production branch and deployment promotion are required.

12 Database blueprint

Domain	Core tables / relations
Identity	profiles, organisations, organisation_members, roles, role_assignments, identity_verifications
Partnership	partner_applications, partnership_agreements, memberships, membership_events, benefit_policies
Finance	contribution_intents, payment_evidence, bank_statement_entries, bank_matches, contributions, ledger_entries, reconciliations, refunds
Programmes	programmes, programme_rules, applications, eligibility_reviews, allocations, impact_reports
Trade	business_profiles, business_documents, product_catalogue, buyer_enquiries, introductions, trade_missions
Investment enquiries	development_projects, project_documents, diligence_reviews, investor_enquiries
Content	articles, destinations, experiences, tags, media_assets, pages, translations
Platform	notifications, email_events, consent_records, support_tickets, audit_events, feature_flags

Database invariants

• Amounts: store minor currency units in BIGINT, explicit ISO currency code, no floating-point money maths; use immutable settlement records.

• Use UUID / ULID primary keys, foreign keys, unique constraints on references and bank transaction IDs, timestamps in UTC, and intentional indexes.

• Row Level Security for every exposed table and storage object. Staff privileges cannot rely on hidden buttons; enforce server and database policies. [S8]

• Never hard-delete verified financial events; use reversal entries and separately controlled retention / privacy deletion procedures.

• Store contribution confirmation actor, time, linked evidence, bank match and audit trail in a single transaction.

13 PWA specification

The product must launch as an installable, secure Progressive Web App, not simply a responsive website. Follow Next.js PWA guidance for manifests, icons, service workers, installation and push flows. [S9]

• Manifest: name “Jos Globally”, short_name “Jos Globally”, start_url “/dashboard”, display “standalone”, theme_color #123C35, background_color #F5F2E9, 192x192 and 512x512 icons including maskable assets.

• Offline-safe shell, cached public editorial pages, install guidance, online/offline indicators, update prompts and clear offline fallback.

• Never cache private receipt images, bank account screens, sensitive responses, authentication tokens, or authenticated finance operations in shared caches.

- Queue safe drafts locally when practical; financial confirmation and uploads require connectivity and explicit server acknowledgement. Avoid offline writes that appear as settled payments.
- Push: permission after user intent; event-driven receipt reviewed, programme notice, ticket update; web push support depends on browser and platform.
- Test install, navigation, deep links, standalone viewport, service-worker updates and session restoration on Chrome Android and Safari iOS; support reduced motion.

14 Security, privacy and abuse protection

- Least privilege, MFA for all administrators, dual-control finance actions, admin IP/device anomaly alerts, session revocation and emergency access recovery.
- HTTPS, strong CSP, secure cookies, strict input validation, CSRF controls for state-changing actions, rate limits, bot resistance, file scanning and scoped signed links.
- Use managed secrets, no service-role keys in client JavaScript, signed webhooks, idempotent financial actions, dependency scanning and regular penetration testing.
- Document lawful basis, consent where required, retention, access / erasure requests, security incident response, vendor contracts and cross-border data flows.
- Nigeria Data Protection Act 2023 governs applicable processing; determine whether the operator has NDPC registration or additional obligations. [S2]
- If processing personal information in China and transferring it abroad, assess PRC PIPL and 2026 cross-border transfer rules with China counsel before data sharing. [S10]
- Screen high-risk organisations, conflicts and suspicious payments against documented compliance policy and bank / legal guidance; financial institution reporting obligations are not automatically identical to platform duties.

15 Roles, access and operational processes

Role	Granted capabilities / restrictions
Visitor	Browse published content and publicly disclosed aggregate impact; no private data.
Partner	Own profile, own contributions, own applications, own support cases.
Business representative	Manage a verified company subject to organisation membership and review.
Finance reviewer	Inspect assigned proof and bank matches; cannot independently give final authorisation where dual approval required.
Finance approver	Approve within limits, distinct from reviewer; every action audited.
Programme / trade manager	Review opportunities and introductions, no unrestricted access to finance evidence.
Content editor	Draft content; publishing rights separate from drafting.
Compliance / auditor	Read permitted evidence and export reports; access is time-bound and logged.
Super admin	Provision operators and policies; must not bypass finance controls or erase logs.

Service level expectations (targets, not promises)

Receipt queue visible immediately; staff review target within 1-2 business days after sufficient bank evidence; support first response target within 2 business days; critical-security escalation immediate. Establish team coverage, public holidays and customer notices before guaranteeing any SLA.

16 Delivery roadmap: 20-week baseline

Phase / weeks	Core delivery	Exit criteria
0 — Weeks 1-2	Legal structure, benefit definition, scope, bank policy, China operating model, product requirements, content inventory	Signed requirements and compliance decision log
1 — Weeks 3-4	Brand, design tokens, responsive prototypes, architecture, DB model, auth, CI/CD, environment setup	Design sign-off and working development/staging pipeline
2 — Weeks 5-8	Homepage/CMS, partner onboarding, contribution intent, private upload, member dashboard	End-to-end flows pass accessibility and functional QA
3 — Weeks 9-11	Finance review, bank reconciliation, dual approval, ledger, reports, notifications, audit logs	Reconcilable mock + real sandbox transactions; no self-approval
4 — Weeks 12-14	Installable PWA, offline-safe experience, push, hardened permissions, load/security testing	PWA acceptance + security and recovery drills pass
5 — Weeks 15-17	Business directory, early trade/China Desk enquiries, impact pages, pilot ops	Verified content; pilot trade leads routed correctly
6 — Weeks 18-20	Controlled pilot, staff training, production launch, monitoring and post-launch fixes	Launch checklist, support roster, incident playbook and metrics

Post-launch quarters: Q2 add export readiness and matchmaking; Q3 add destination catalogue and programme application system; Q4 add investment information hub, multilingual capability, institutional reporting and international chapter operations - only when compliance and traction justify them.

17 Product quality and acceptance tests

- Functional: unique contribution reference, exact state transitions, delayed/duplicate receipt handling, disputes, upload errors, refunds and reconciliation discrepancies.
- Security: IDOR, role escalation, RLS checks, cross-tenant files, webhook replay, malicious attachments, brute force, CSRF/XSS and admin separation.
- Performance: meaningful page metrics on typical Nigerian midrange Android devices, lazy-loaded imagery, CDN, responsive photographs, database query profiling.
- Accessibility: keyboard, screen reader labels, contrast, focus, touch size, form error recovery and bilingual-ready layouts.
- Resilience: backup/restore drills, error handling, service worker rollback, failed deployment rollback, notification retry and downtime banner.
- Business UAT: receipts can be traced to bank entries and ledger postings; partner totals reconcile; no pending amount counted as confirmed.

18 Success metrics and analytics

Level	Metrics
Acquisition	Qualified visits, sign-up completion, verification completion, conversion from visitor to confirmed partner
Contribution quality	Confirmed amount, contributing partners, repeat voluntary contributions, unmatched payments, review backlog
Trust	Time to verification, support resolution, rejected / disputed transactions, published spending vs reconciliation
Trade	Verified SMEs, qualified international buyer enquiries, facilitated introductions, export-readiness completions
Development	Projects screened, eligible applications, verified outcomes, disclosed partners and programme reports
Discovery	International site traffic, destination enquiries, diaspora chapter participation and engagement

Suggested pilot targets must be established with stakeholders, not fabricated as forecasts. Use weekly funnel analysis and quarterly impact reviews. Avoid vanity metrics such as raw “stakeholder” signups or unverified currency totals.

19 Delivery team, dependencies and indicative budget

Core roles: product owner, UX/UI designer, full-stack Next.js engineer, backend/DB engineer, QA/security support, DevOps capacity, programme operations lead, finance reconciler, compliance/legal consultant, content lead and China Desk representative. One person may cover multiple engineering responsibilities, but finance review/approval must remain separated.

Cost bucket	Pilot planning allowance (NGN)
Discovery, design and content	450,000 - 1,100,000
Engineering MVP + admin / finance / PWA	2,500,000 - 6,000,000
QA, security and operational hardening	450,000 - 1,200,000
Legal/compliance and policy drafting	300,000 - 1,200,000
Infrastructure and third-party services (first 3 months)	120,000 - 450,000
Contingency / rollout / staff enablement	500,000 - 1,500,000

Cost bucket	Pilot planning allowance (NGN)
Indicative one-off pilot envelope	4,320,000 - 11,450,000

These are unquoted scenario allowances for planning only, not researched vendor prices or committed cost estimates. Excludes China office rent, staffing / travel, payment provider charges, audits, government filings, import/export operations and extensive international outreach. An internal engineering team can lower external cash cost but not operational labour cost.

20 Risk register and controls

Risk	Mitigation / owner
Contribution misinterpreted as ownership or investment	Legal counsel defines membership terms; product blocks investment language until authorised.
False / duplicate transfer proof	Bank reconciliation, deduplication, evidence hashing, 2-person approvals, immutable log.
Misuse of public funds	Purpose-specific allocation controls, publish spending and conflicts, audit.
Misleading international office claims	Verify office registration, named staff, capabilities and jurisdiction before launch.
Fake buyers, suppliers and projects	KYC, business verification, diligence, no undisclosed guarantees.
Privacy leak from receipts / identities	Private storage, RLS, short-lived signed links, retention and breach response.
Scope creep / stalled delivery	20-week staged gates; limit MVP to movement / finance / reporting / PWA.
Reputational damage / low trust	Publish legal entity, board, account ownership, outcomes, support routes and honest metrics.

21 Business rules and non-negotiable decisions

- Only contributions settled into the legally approved movement account qualify as confirmed; submitted bank receipts are pending evidence.
- All partner benefits must be defined in publicly accessible terms, with effective dates, approvals and no implicit equity or guaranteed financial return.
- Finance personnel cannot erase settled entries, inflate totals or approve their own submissions.
- Every organisation must have identity / business checks proportionate to permitted actions.
- Public figures, civil servants and institutional partners participate subject to applicable ethics, disclosure and public-sector rules; no inferred official endorsement.
- No listing should imply that an unverified investment is endorsed, safe or government-backed.
- China-based records and cross-border access must have a documented jurisdictional compliance design.

• The contribution feature can launch before trade, but trust, reconciliation, governance and accessibility are release blockers.

22 Launch checklist and immediate next steps

• Confirm exact owning entity, CAC status, CAGE Holdings relationship and which entity operates the website, holds funds and signs agreements.

• Have counsel classify contributions, membership rights, programme benefits, political/public-sector participation and applicable SEC/AML/tax rules.

• Approve one official corporate account and bank statement/reconciliation access with appropriate finance controls.

• Confirm the actual China office city, legal presence, named contact, scope and employment/contracting arrangements.

• Appoint product owner, finance reviewer, independent approver, compliance lead and editorial administrator.

• Approve core brand direction and 15-20 essential wireframes; validate with 5-8 representative user types.

• Build architecture + schema + auth + contribution workflows in a staging environment; conduct financial and security UAT.

• Publish Terms, Privacy, Contribution Policy, Refund/Correction Policy, Governance, FAQs and public reporting cadence.

• Launch a small controlled pilot and validate bank matching, support operations, PWA installation and post-contribution engagement.
